

Executive KPI Dashboard

Superstore Sales Analysis using Power BI

Prepared by: Sneha

October 2026

1. Objective

To design a concise, one-page executive dashboard in Power BI that gives management a quick view of sales performance, profitability and order activity, with dynamic filters (slicers) for Year, Region, Category and Segment.

2. Dataset Overview

Item	Details
Dataset	Superstore (superstore.csv)
Records	9,994 rows, 21 columns
Period	3 Jan 2014 to 30 Dec 2017
Key fields	Order Date, Region, Segment, Category, Sub-Category, Sales, Quantity, Discount, Profit
Data quality	No missing values, no duplicate rows, Ship Date never before Order Date

3. Tools Used

- Power BI Desktop (data loading, Power Query, visuals, slicers)
- DAX (KPI measures and date columns)

4. Data Preparation

- Loaded superstore.csv with Get Data > Text/CSV (file origin 1252 Western European).
- Set data types: dates as Date, Sales/Profit/Discount as Decimal, Quantity as Whole Number, Postal Code as Text.
- Created helper columns Year, Month No and Month from Order Date for time analysis.
- Created DAX measures for all KPIs.

5. KPI Definitions

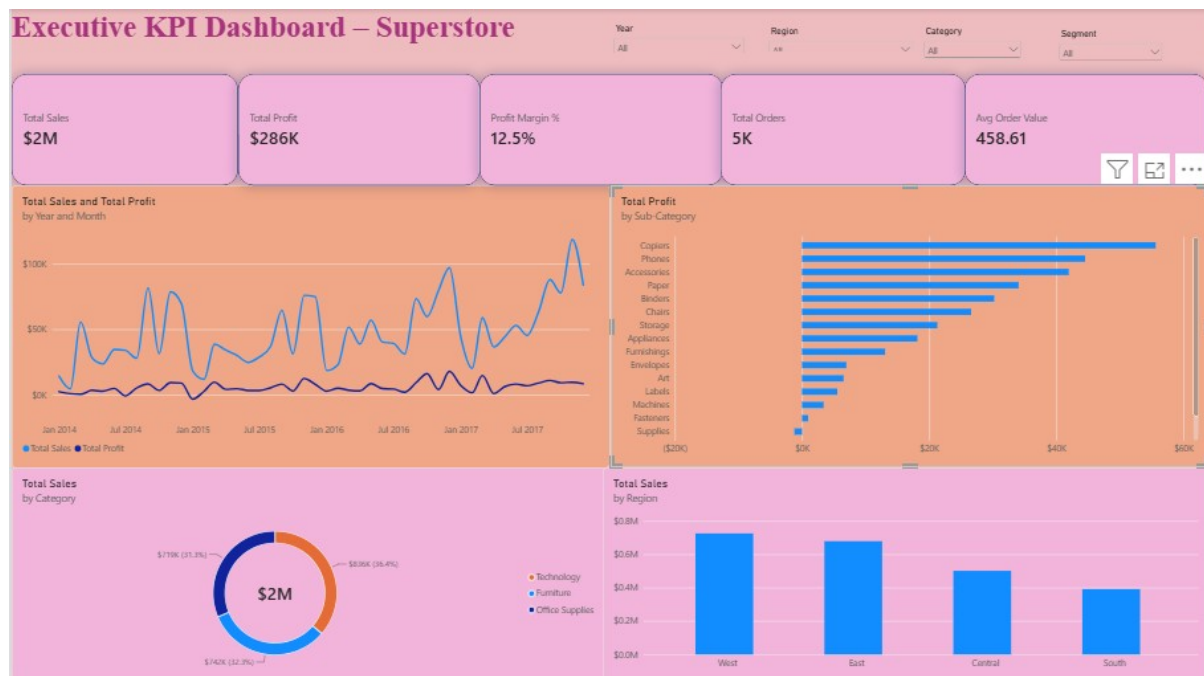

KPI	Formula	Business meaning
Total Sales	Sum of Sales	Total revenue generated
Total Profit	Sum of Profit	Total profit earned after costs
Profit Margin %	Total Profit / Total Sales	Profit earned from every \$100 of sales
Total Orders	Distinct count of Order ID	Number of unique orders
Avg Order Value	Total Sales / Total Orders	Average revenue per order

6. KPI Summary (all years)

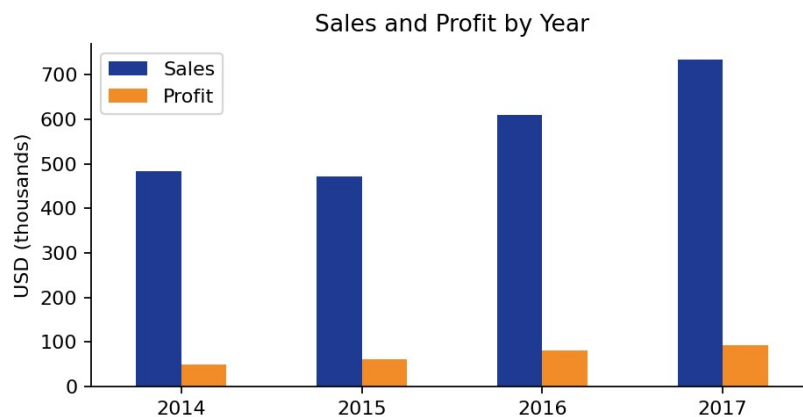

KPI	Value
Total Sales	\$2,297,201
Total Profit	\$286,397
Profit Margin	12.5%
Total Orders	5,009
Avg Order Value	\$459
Avg Discount	15.6%

7. Dashboard

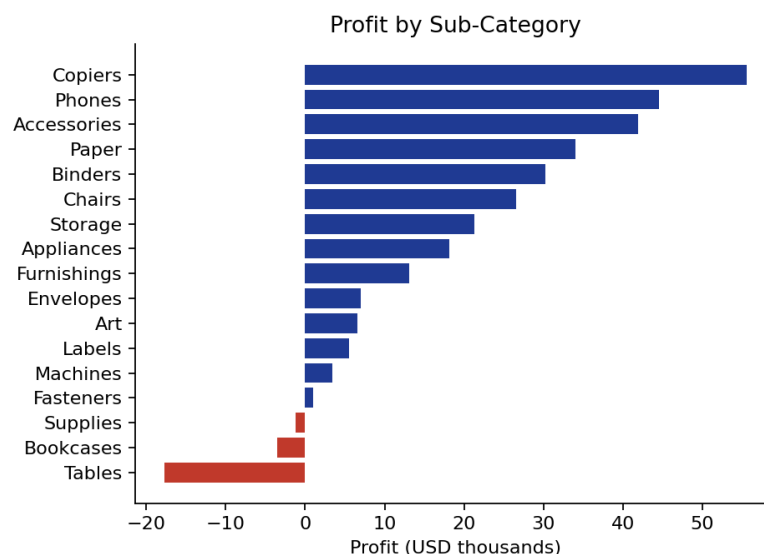

Slicers: Year, Region, Category, Segment. Visuals: KPI cards, Sales and Profit trend, Profit by Sub-Category, Sales by Category, Sales by Region.

8. Key Insights

- Growth: Sales rose from \$484K in 2014 to \$733K in 2017, and profit almost doubled from \$49.5K to \$93.4K.
- Furniture earns only a 2% margin, while Technology and Office Supplies earn about 17%.
- Tables (-\$17.7K) and Bookcases (-\$3.5K) are loss-making sub-categories, likely due to heavy discounting.
- Central region has the lowest margin (8%); West (15%) and East (14%) perform best.
- Copiers, Phones and Accessories are the top profit contributors.

9. Recommendations

- Review pricing and discount limits for Tables and Bookcases.
- Push high-margin categories (Technology, Office Supplies) in marketing.
- Investigate why Central region margins are low and cap discounts there.

10. Conclusion

The dashboard gives management a one-page view of performance with a small set of KPIs and useful slicers. Overall business is growing, but profitability depends heavily on Technology and Office Supplies, while Furniture needs attention.
